

AIRPORTS

Solution Guide

PIONEERING BAGGAGE HANDLING SYSTEMS

Datalogic has been one of IATA's members, that defined the Standard Label used today in Airports (IATA Resolution 740) and has been chosen to define the Achievable Read Rate of a barcode reading system in real conditions (IATA report dated 23rd January 1995).

Datalogic has always been a Baggage Handling System (BHS) pioneer: the company installed the first Automatic Reading Station for baggage handling in Europe (**Milan - Linate, 1984**). Since then, over 870 Datalogic reading systems have been installed in more than 200 airports across 5 continents (including Tokyo, Dubai, Hong Kong, Sidney, Paris, London, Kuala Lumpur, Chicago, and Atlanta), guaranteeing a fast, reliable and efficient service. Every day we work with our partners to minimize baggage loss, reduce delivery times, improve accuracy, and increase passenger satisfaction.

Datalogic remains a leader in the airport solutions market, offering breakthrough technologies from laser readers to vision systems.

DATALOGIC SOLUTIONS FOR AIRPORTS

End-to-end traceability is one of the biggest challenge that airlines, airports and airground handlers are facing; offering a better service to their customers and increasing the passenger satisfaction.

The number of mishandled bags has been reduced year over year, but the related costs are still significant for airlines and airports. The new IATA 753 regulation requires airline members to track baggage from the bag check-in to the passenger pickup. This means airlines and airports need to upgrade their BHS systems by adding more tracking points along every step of the bag's journey.

Datalogic can help airlines and airports to cover the gaps in bag traceability by offering complete solutions meeting the new IATA standard. In addition to handheld readers for bag check-in and mobile computers for the bag reconciliation process, Datalogic offers baggage tracking solutions on automated belts using stationary industrial barcode reading technology . Not only are these solutions easy to implement, they are highly customizable to fit all material handling requirements.

FOR AIRPORTS GLANCE

HANDHELD SCANNERS

Industrial rate, durable build
handheld barcode readers

STATIONARY INDUSTRIAL SCANNERS

LASER: State-of-the-art digital laser
scanner with highest depth of field

IMAGER: 5-9 MP camera readers,
image output and highest performance

BAGGAGE RECONCILIATION

BAGGAGE SORTING

CHECK-IN & SECURITY CONTROL

CHECK-IN & SECURITY CONTROL

1

1. MANUAL CHECK-IN

Check-in is the first procedure for a passenger. At the check-in desks, the agent validates the flyers' passport, documents, tickets and then registers the luggage by applying a barcode label. Later he scans the barcode label using a Datalogic handheld reader easily integrated into the check-in desk, providing a quick and efficient scan of the luggage label. Several models with different reading technologies, connectivity, ergonomics and design be selected to meet specific needs.

2

2. AUTOMATIC BAG DROP

Passengers are guided to put their luggage onto a machine belt. The barcode tag on the luggage is automatically identified by stationary industrial scanners (laser or imager) to allow acceptance into the baggage handling system.

3. SEMI AUTOMATIC SELF CHECK-IN

Several airlines have a self service kiosks to speed up the check-in and baggage drop-off process, reducing wait times. A handheld reader is used by passengers during the self check-in process to scan the barcode label attached to their luggage.

4. KIOSKS

With the use of a mobile phone, passengers can now check-in from almost anywhere. By showing the 2D code on the phone screen to the kiosk barcode reader, the boarding pass can be printed.

5. SECURITY CONTROL

The boarding pass is manually checked using compact mobile computers during passenger transit from different airports areas.

BAGGAGE SORTING

1

1. AUTOMATIC BAGGAGE IDENTIFICATION: LASER TECHNOLOGY

Automatic Tag Reading (ATR) systems are able to detect both Barcode label and RFID tag

• Barcode Laser Technology

Barcode laser technology represents a cost-effective and reliable solution which is able to guarantee good performance especially on check-in labels. Reading performances are compliant with IATA 1740a recommended practice

• RFID Technology

RFID technology provides highest read rate even when tag is not visible to laser view line. Optimized antenna and tracking software deliver unsurpassed performances with tag compliant to IATA1740c RFID recommended practice

2

2. BAGGAGE GAUGE

Volume Dimensioner is used to determine whether baggage should continue down the material handling system, be diverted for special handling, and to ensure the scanned baggage fits within the supported dimensions of the EDS system.

BAGGAGE SORTING

5

3. AUTOMATIC BAGGAGE IDENTIFICATION: IMAGING TECHNOLOGY

ATR imager-based barcode readers provide the highest level of performance even on damaged labels. Camera technology is capable of value added image based functionalities such as supporting OCR and Videocoding. Optional RFID technology helps to provide highest reading rate (not directly visible label) by adding BHS RFID KIT.

4. TRACKING AND CONTROL

Different types of sensors such as photocells and light curtains are used in baggage handling systems for tracking, height control, and positioning. Encoders are used for conveyor speed measurement.

5. BAGGAGE CAPTURE

Baggage capture is an optional feature that can be added to any proposed solution. The camera will capture and save a color image into the airport's IT systems for every bag.

6. WEBSENTINEL™ PLUS

Websentinel Plus monitor and statistics package equip you control room with Datalogic's supervisor application. Systems and devices are controlled via a web interface providing performance statistics as well as warning and alerts to ensure your system is always running at its best.

BAGGAGE RECONCILIATION

1. RECONCILIATION: HANDHELD SCANNERS

Baggage reconciliation, performed with industrial handheld readers as such as Datalogic's PowerScan imagers ensures that luggage is loaded onto the correct aircraft.

2

2. RECONCILIATION: MOBILE COMPUTERS

Baggage reconciliation can be executed at the baggage pick up sites using Datalogic Mobile Computers such as the Memor 11. It can also provide data on incoming and departing flights.

FOCUS ON AUTOMATIC TAG READER SOLUTIONS

Datalogic s' Automatic Tag Reader (ATR) is the high performance solution in baggage tracking & sortation applications. It responds to the key needs of challenging airport applications asking for excellent throughput, reliability and simple maintenance.

Datalogic ATR offers the simplicity of a standard solution in conjunction with very high performance thanks to the use of best in class barcode readers. Continuous uninterrupted operation is provided through the Datalogic Redundant System (REDS). REDS promptly reacts to any system failure, automatically enabling the backup hardware.

All the products are designed to minimize maintenance activities on site and to allow, in case of failure, a complete automatic backup, without any external interaction. Moreover, complete system remote surveillance and control is guaranteed by Datalogic WebSentinel™, a software application that continuously monitors the reading arrays and, upon the occurrence of faulty conditions, immediately notifies the event, even by e-mail.

- Highest barcode reading performance through multiple technologies
- Highest reliability
- Modular solution meeting different needs and conditions
- 100% redundant system, completely fault tolerant
- Auto-diagnosis, e-mail error notifications
- Designed for an easy and rapid installation
- Easy to maintain and upgrade
- Zero downtime solution
- Full remote control

LASER+IMAGER+RFID: THE BEST IDENTIFICATION TOOLSET

Datalogic ATR Solution exploit three available Identification technologies, all in compliance with IATA recommended practices.

You can select among our BHS Solutions (Laser or Imaging or hybrid) the best match for your printed label reading application.

BHS RFID KIT can be optionally added on top of any BHS Solutions when RFID tag is present.

1 - Optional Kits to be added to BHS solution to read RFID TAG

2 - This version is performing Tag reading without assigning it to exact Baggage (not for Sorting application)

3 - This top imager kit is optional for any laser based solutions

SC5100 CONTROLLER

Standard Control Unit for Ease of Integration/Configuration/Monitoring:

- Results in leaner maintenance and troubleshooting lowering the Total Cost of Ownership (TCO)
- Interact directly with Keypad and Display without the need to open an additional enclosure Higher system availability, higher productivity RFID

PRODUCTS PORTFOLIO

AV500/AV900

- High performance camera (5MPx AV500, 9MPx AV900) with integrated image processing system
- Image saving to external locations through the dedicated high speed Gigabit Ethernet port
- White and Red lighting options

DS8110/DX8210

- Ethernet Bus Connections (EBC) for high-speed data transmission and real time synchronization
- Excellent performance on low quality code and unpredictable reading conditions
- Fully redundant configuration and no single point of failure

DS5100

STATIONARY INDUSTRIAL SCANNERS

SC5100

- Laser (DS-DX), Imagers (AVs), Dimensioner Native Integration
- 4 GB ETH embedded switch
- 5 inch Graphical Color display and Clear Status LEDs
- Supports Full Redundant Controller Layout

DM3610 1 AND 2 HEAD SYSTEM

- Ultra-high performance, in-motion, overhead dimensioning unit
- Automatically measures the length, width, and height of packages
- Performs highly accurate measurements
- Perfect solution for spatial management applications

WEBSENTINEL PLUS

- Very advanced monitor
- Offers key features, benefits, and insights to end-users and System Integrators specializing in Factory Automation and Transportation and Logistics.

STATIONARY INDUSTRIAL SCANNERS

POWERSCAN 9600 SERIES

- Ultra-rugged design, IP65 and IP67
- Embedded industrial connectivity, modular
- Wireless charging reducing TCO
- Doubled radio range and OLED display
- Smart batteries and diagnostics

GRYPHON™

- Enhanced reading technology for superior scanning and depth of field
- Intuitive highly visible aimer to easily target the code to be read
- Disinfectant Ready enclosures resistant to harsh chemical cleaning
- Wireless charging (no need for contact cleaning or maintenance procedures)

HANDHELD SCANNERS

MEMOR™ 11

- Ultra-Ergonomic, compact and robust
- 5 inch brilliant capacitive multi-touch HD display
- Validated by Google as 'Android Enterprise Recommended' for rugged devices
- Wireless charging increases reliability dramatically by eliminating contacts on both the device and docks
- Ruggedized with drop resistance to 1.5 m / 5 ft to concrete and IP65 sealing
- Full suite of cellular connectivity for voice and data, featuring LTE-Advanced/4G+

SKORPIO™ X5

- Largest 4.3" high visibility display in its class
- Scan engine: 1D Imager, 2D Imager Standard Range, Mid-Range and near/far Extra-Long-Range Imager
- Handheld and Pistol-grip form with 3 keyboard layouts
- Fully rugged 1.8 m drop and IP65 rating
- Choice between Wireless Charging or Wired versions with dedicated docks

MOBILE COMPUTERS

EASEOFCARE SERVICE PROGRAMS

EASEOFMIND: Service programs that meet every need

Whether you own a small manufacturing plant or manage a large enterprise, know that Datalogic supports you at all stages of product life with a range of customizable Services solutions.

With walkthroughs to ensure every required component is included in your purchase, customized installation to meet your specifications, onsite installation and training, through technical support and product maintenance agreements, Datalogic EASEOF Services means your solution will work at its highest possible efficiency throughout its life.

EASEOFBUILD: Personalized solution design and installation

We work with you to design an installation that works best for your workflow and timing. Datalogic-trained technicians carefully install, configure and commission your solution to ensure optimum performance. During and on completion of installation, we also train your staff in all aspects of system use.

EASEOFTRAIN: Maximized benefit through continued training

Ensure that your operators and onsite IT and maintenance staff are getting the most out of your Datalogic solutions with our customizable training programs. We offer a range of training opportunities: onsite, at our facilities, and at regional training events, or online.

Contact your Datalogic Authorized Reseller for details on upcoming training events and programs.

EASEOFPM: Keep equipment in top shape

Keep your equipment in top operating condition with our onsite preventative maintenance program. PM service not only increases equipment life but ensures that it always operates at peak efficiency and lowest cost. Our Datalogic-trained technicians thoroughly inspect all components, replace parts as needed, and ensure that the entire installation performs to standards.

EASEOFSUPPORT: Technical Support that fits your needs

Get help fast with our 24/7 phone support programs.

Datalogic can tailor a service-level agreement to your specific needs, with worldwide coverage, with add-ons to dispatch a technician should an issue require on-site assistance.

EASEOFCARE: Extended service plans that fit your budget

Your business is not one-size-fits-all, and neither are our equipment service plans. Our EASEOFCARE extended repair subscriptions are flexible, customizable and as responsive as your need. Four convenient offerings cover most every need; if yours are different, let's talk—we can help you with staged spares, wear-parts forwarding, and other solutions that keep your mission-critical operations working as hard as you do.

EASEOFDEV: Customized development and management

Make your Datalogic solution work its hardest for you by using our custom integration and development services. Our experienced developers and Application Engineers will customize your solution, integrating components from different vendors to meet your specific needs, so your solution performs exactly the way you envision.

We work with you through your solution's lifetime to ensure continuing performance through your changing needs. When it's time to upgrade, we work with you to evaluate where new technology will help you get even better performance, and to ensure that new devices integrate seamlessly with existing solutions.

Datalogic at a glance

Datalogic Group is a global leader in the **automatic data capture and factory automation** markets. It is well known around the world for designing and producing barcode readers, mobile computers, sensors for detection, measurement and safety, RFID, machine vision and laser marking systems. Datalogic solutions help customers increase the quality of their processes in the **Retail, Manufacturing, Transportation & Logistics, and Healthcare** industries.

The Group has **50 years of history** behind it, during which enormous successes have been achieved: **8 R&D centers and 3 DL Labs in Italy, USA, Vietnam, and China; 11 manufacturing and repair facilities** in USA, Hungary, Slovakia, Italy, China, Vietnam, and Australia; a **portfolio of about 1,200 patents and patent applications** in multiple jurisdictions; thousands of prestigious partners and customers spread across five continents.

Datalogic Group has **offices in 29 countries worldwide**, with the headquarters in Bologna, Italy. It is through the close cooperation of **more than 3,000 employees** that Datalogic can boast some of the most remarkable automatic data capture and factory automation solutions available today in the market.

CUSTOMER SERVICE

Datalogic's Customer Service offers a wide and complete range of post-sales services. It is organized in three levels of support, in order to guarantee the most appropriate professional assistance based on the specific problem. Datalogic's Customer Service can deploy in each territory a team of multi-lingual professionals, with a broad technical expertise across the whole product range.

Our standard service portfolio includes: warranty extension, fast turnaround time for repairs, 24/7/365 phone support, next day on-site intervention and site audits. Datalogic can tailor the service offering to your specific needs.

Our experts will support every stage of your projects, from feasibility study to extended post-sales support, performing, when necessary, root cause analysis and remediation.

EASEOFCARE Service Programs

Datalogic's EASEOFCARE Service Programs provide superior life-cycle support to ensure that products are always operating at peak performance. A variety of Service Programs are available to match your business requirements:

**FAST REPAIR TURNAROUND
(OVERNIGHT/2 DAYS)**

**ACCIDENTAL DAMAGE
COVERAGE**

**BOTH WAYS FREIGHT PAID
BY DATALOGIC**

**DATALOGIC SHIELD
FOR MOBILE PRODUCTS
INCLUDED**

**3-5 YEARS CONTRACT
SERVICE OPTIONS**

Please contact your sales representative to find out what type of services are available in your region.
